

SUMMARY

Data-driven analyst with experience in large-scale social media corpus development, sentiment monitoring. With a background in AI & Language, digital humanities, I have an in-depth knowledge of research methodologies and data visualization, generating a hypothesis, building a structured analysis, evaluating methods and results, and driving measurable business impact.

Programming: Python, SQL

Libraries: NumPy, Pandas, PyTorch, scikit-learn

Tools: Git, Jupyter, Docker

Data & ML: Machine Learning, Statistical Modeling, NLP, SpaCy, Data analysis, Huggingface Pipelines

Other: TEI/XML, Neo4j, Protégé, OpenRefine, relational databases

EDUCATION

University of Chicago, Chicago, IL, USA

Master of Arts: Digital Studies of Language, Culture, and History

September 2025 – June 2026

Relevant Coursework: Digital Texts I (Natural Language Processing), Data Publication, Computational Linguistics,

Colby College, Waterville, ME, USA

Bachelor of Arts: Music Interdisciplinary Computation; French and Francophone Studies

August 2021 – May 2025

GPA: 3.83/4.2

Award: The Arthur Greenspan Prize for Excellence in French and Francophone Literary Studies

Relevant Coursework: Artificial Neural Network, Data Structure/Algorithm, Data Analysis/Visualization, Visual thinking: Media

Semesters abroad: DIS Copenhagen (Fall 2023), University of Geneva (Spring 2024)

ACADEMIC/RESEARCH EXPERIENCE

University of Chicago, Chicago, IL

Researcher

January 2026 –

- Designed and implemented a social media data collection pipeline using Python, scraping and analyzing user-generated content to identify sentiment patterns and emerging discourse trends
- Conducted sentiment and thematic analysis using statistical methods and models from hugging face to detect misogyny

Colby College, Waterville, ME

Senior Year Capstone Project

September 2024 – June 2025

- Built a web-based harmonic analysis system for 300+ jazz standards
- Parsed chord progressions and mapped them to Roman numeral representations using rule-based algorithms
- Developed a feature extraction pipeline to analyze harmonic structure and musical patterns

French and Francophone Studies Research Assistant

January 2025 – June 2025

- Conducted in-depth literary analysis of Corneille's *Médée*, focusing on themes of crime, vengeance, and culpability; Identified and categorized key passages based on character interactions and moral judgments. Organized findings chronologically to illustrate thematic development and narrative structure.

Computer Science Teaching Assistant

August 2022 – June 2023

- Supported students by addressing coding-related queries and challenges, fostering a deeper understanding of programming concepts.

DATA RELATED WORK EXPERIENCE

Colby College, Waterville ME

French Department Media Assistant

August 2022 – June 2025

- Demonstrated proficiency in content curation. Ensured that the website reflected the latest and most relevant information, contributing to a more dynamic and engaging online presence.
- Collaborated with department members to gather and organize multimedia resource to enhance the overall accessibility and visual appeal of the department's online platforms.

Computational Music and Acoustics Research Assistant

June 2023 – August 2023

- Collaborated on the development of *Garabato*, a cutting-edge musical software tool.
- Utilized MAX to orchestrate neural networks and algorithmic music, transforming musical motifs in response to user gestures; Applied neural network methodologies to train and generate novel musical concepts, contributing to the project's creative and technical success.

McCann World Group, Taipei, Taiwan

Account Executive Summer Intern

July 2024 – August 2024

- Assisted data collection, competitor analysis for clients, web traffic monitoring; created a strategic plan for a collaborative intern project
